PROFILE

Master of Applied Computing student with hands-on experience supporting deployment projects, automating project reporting, and tracking project milestones across cross-functional Agile teams. Process-oriented and proactive, with strong communication skills and a track record of building customer relationships and solving real-world network problems independently. Eligible for Fall 2026 co-op.

SKILLS

Operations & Delivery: Deployment project support, project milestone tracking, process automation, digitalization initiatives, workflow streamlining

Stakeholder & Customer Relations: Cross-functional stakeholder coordination, customer relationship building, Agile/Scrum, problem-solving, independent project ownership

Technical (asset): Python, Java, Bash, Linux, TCP/IP and network routing/switching

EXPERIENCE

Software Engineer, Network Systems (Co-op) | Freshers Booth, Ahmedabad, India *Jun 2024 – Aug 2024*

- Supported delivery of a network backend deployment project by integrating LLM-driven modules within a 6-person Agile team, cutting third-party API response delays by 40% and strengthening customer relationships through more reliable service.
- Took initiative to engineer thread-safe components across 500+ simultaneous API events, documenting procedures that helped the team streamline workflows and meet shared team goals.

PROJECTS

Network Management Automation Platform

Jan 2026 – Feb 2026

Java, Python, Bash, Linux, TCP/IP, PostgreSQL, Docker, GitHub Actions

- Automated project reporting and incident remediation by building a monitoring system that tracked live node metrics and triggered self-correcting workflows, cutting network incident response time by 45% without manual intervention.
- Drove a digitalization initiative for customer network problems by engineering an orchestration layer that closed tickets autonomously, applying troubleshooting patterns across live ISP-style routing environments.

Distributed Real-Time Messaging System over IP Network Stack

Sep 2024 – Oct 2024

C++, Go, TypeScript, Linux, TCP/IP, Redis, PostgreSQL, Docker

- Owned a deployment project independently from design through delivery, coordinating project milestones to ship a distributed system 40% faster than a WebSocket baseline.
- Validated reliability under load by stress-testing routing logic across 100+ simultaneous connections on Linux, applying IP network stack fundamentals and problem-solving throughout.

Real-Time Network Stream Analytics Engine

Jan 2025 – Apr 2025

C++, Python, Go, Linux, TCP/IP, multithreading, Docker

- Maintained sub-100ms latency across 50+ concurrent network streams by tuning thread scheduling on Linux, producing performance metrics used to keep stakeholders informed.
- Kept the pipeline auditable under high-concurrency load by structuring it into modular components, supporting consistent reporting on system performance.

EDUCATION

Master of Applied Computing (Co-op) – University of Windsor, Windsor, ON *Aug 2025 – Present*

Relevant courses: Computer Networks, Operating Systems, Distributed Systems, Software Engineering, Database Systems

Bachelor of Computer Science and Engineering | GPA: 9.46/10 – Indus Institute of Technology & Engineering, Ahmedabad, India *Jul 2021 – May 2025*

Graduated with First Class Honours; coursework in Data Structures, Algorithms, Network Programming, and Systems Design
