Hiring Team
Ericsson
Toronto, ON

Dear Hiring Team,

I am writing to apply for the Network Operations Intern position with Ericsson's Wireless Networks team in Toronto, starting September 2026. As a Master of Applied Computing student at the University of Windsor with hands-on experience supporting deployment projects and automating project reporting, I am drawn to the chance to support Program Directors and Project Managers across Ericsson's 5G radio network rollout for such a diverse customer base.

During my co-op at Freshers Booth, I supported delivery of a production network deployment project within a 6-person Agile team, cutting third-party API response delays by 40% and strengthening customer relationships through more reliable service. I also took the initiative to engineer thread-safe components across 500+ simultaneous API events, documenting the procedures so the wider team could streamline workflows and meet shared sprint goals. That experience taught me how much a process-oriented, proactive mindset matters when a small team is balancing technical execution against day-to-day customer impact.

Most relevant to this role, I built a Network Management Automation Platform that automated project reporting and incident remediation, cutting response time by 45% by tracking live metrics and triggering self-correcting workflows without manual intervention. I followed that with a digitalization initiative that closed customer network tickets autonomously by applying troubleshooting patterns across live ISP-style routing environments. Both projects reflect the kind of problem-solving, stakeholder coordination, and independent ownership I would bring to streamlining Ericsson's internal workflows and supporting your customers' day-to-day operations.

I would welcome the opportunity to bring this background in deployment support, process automation, and customer-facing problem-solving to Ericsson's Network Operations team this Fall. Thank you for your time and consideration; I look forward to the possibility of discussing how I can contribute to your team.

Sincerely,
Bhavik Thumbadiya
